Idle C.E. Primary School

Know one more and one less with numbers up to 20.

By the end of Autumn term, pupils in Year 1 should be able to name numbers that are one more than and one less than any number up to 20.

Questions to ask	
What is **one more** than...? What is **one less** than...?	One more than 1 is 2 One less than 1 is 0 One more than 10 is 11 One less than 10 is 9 One more than 19 is 20 One less than 19 is 18 (and so on)

The aim of this maths must haves is to recall one more than and one less than instantly.

Steps to success

In order to help your child embed their knowledge of number, practising little and often is key.

Think of different ways to visit the must have often, such as:

- Practise the maths must haves while walking to school or during a journey in the car or on the bus.

- Use concrete resources that you have around the house, these could be anything from socks, to toys, to peas on their plate!

- Another great way of remembering what one more or one less is, is to use a number line.
